SEVA FEST HACKATHON 2026

Placement & Education

VelaiVaasal: your gateway from classroom to career, in every learner’s own language

Team Members : Sharan Anandan Sujatha, S. Yamini Jayashree, Vasudev R
Chennai Institute of Technology

THE PROBLEM

Learning and a first job are still out of reach for many students

44%

of graduates tested were not job-ready in 2026. Source: India Skills Report 2026

Many learners do not know what to study, have little chance to practise interviews, and never meet an employer.

Talent is everywhere. Access is not.

THREE GAPS

Where students get stuck

Learning gap

Content is scattered and not matched to what employers ask for.

Readiness gap

Few chances to practise resumes, aptitude tests and mock interviews.

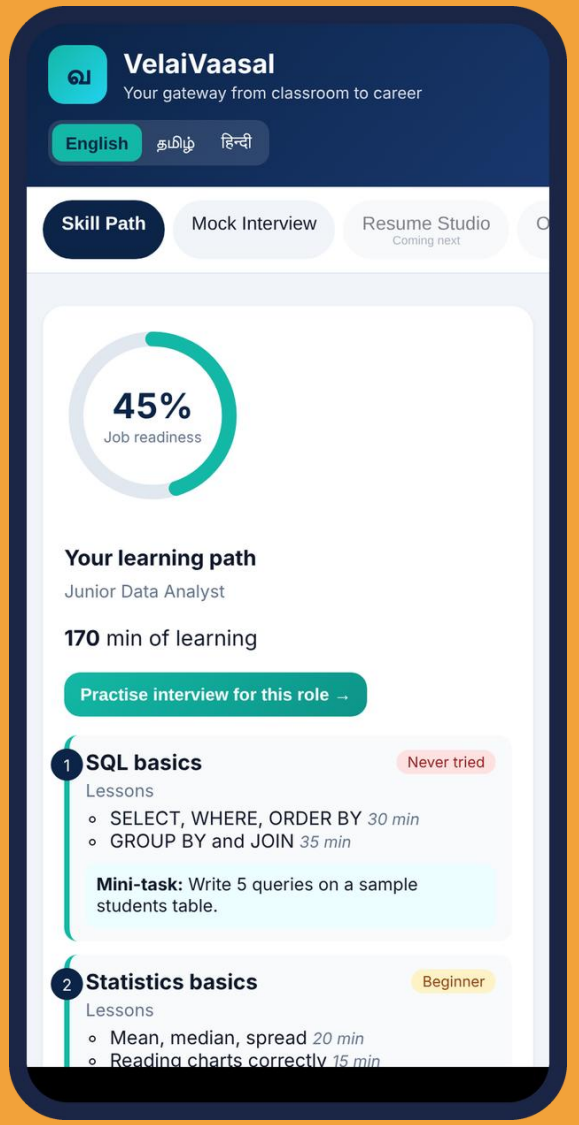

Access gap

Rural and first-generation learners rarely reach mentors or recruiters.

OUR SOLUTION

VelaiVaasal connects learning to a first job.

One platform where students learn skills, practise for interviews and meet opportunities, in their own language.

HOW IT WORKS

From learner to hired in three steps

01

Learn

Short guided paths for IT, finance and service roles, in Tamil, Hindi and English.

02

Practise

Mock interviews, aptitude tests and resume feedback.

03

Get placed

Profile matched to local employers and volunteer mentors.

FEATURES

What the platform does

AI Readiness Analyzer

Baseline assessment of technical, aptitude, communication and problem-solving. Evidence-backed scores.

Skill Gap Detector

Compare competencies against target role requirements. Show strengths, missing skills and priorities.

Mock Interview Coach

Role-specific technical & HR practice with feedback on relevance, clarity and correctness.

Personalised Roadmap

Weekly plan based on measured gaps. Adapts as the student improves and reassesses.

Company Readiness

Compare demonstrated skills to selected job-role profiles. Role-readiness score (not a hiring guarantee).

TPO Intelligence

Department trends, common gaps, students needing support. Actionable insights for placement officers.

CORE INNOVATION

Evidence-to-Readiness Engine

Illustrative example (sample data, not from real students)

Student targeting Java Backend Developer

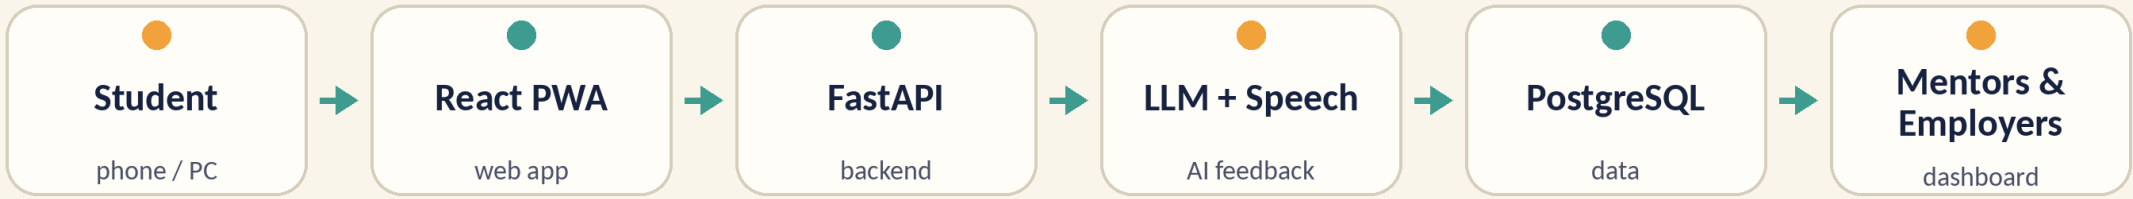

Java fundamentals:	78/100	DSA:	52/100	SQL:	65/100
DBMS:	70/100	Spring Boot:	35/100	Communication:	72/100

Priority gaps: DSA & Spring Boot → targeted weekly plan. Same student has different readiness for Data Analyst.

TECHNOLOGY

Tech stack

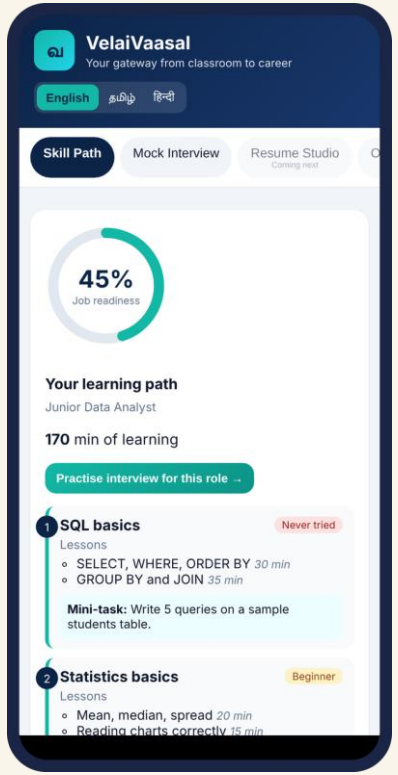

Layer	Our choice	Why it fits
Frontend	React web app (PWA)	Runs well on low-end phones
Backend	Python (FastAPI)	Quick to build and easy to scale
AI layer	LLM API + Tamil/Hindi speech	Interview feedback and recommendations
Data	PostgreSQL (Supabase)	Profiles, progress and job listings

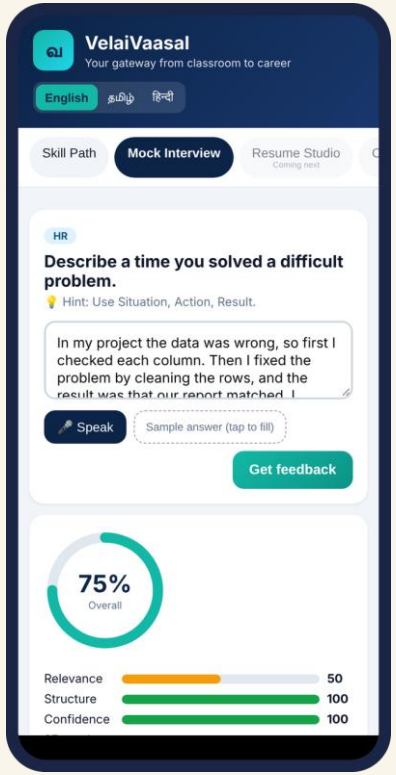

Target architecture. The hackathon prototype runs React, Flask, a rule-based scorer and SQLite.

WORKING PROTOTYPE

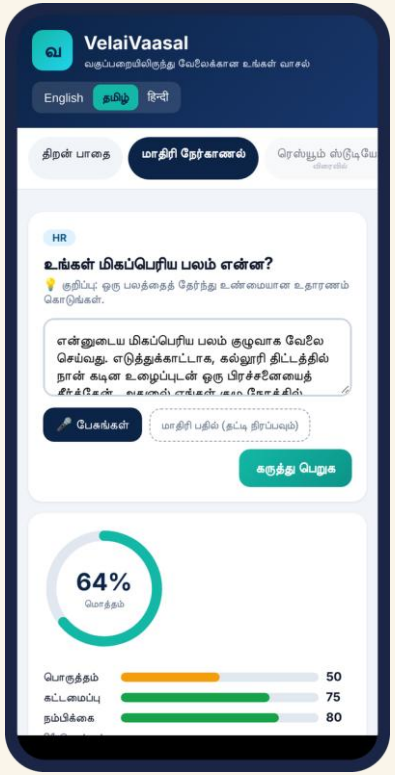

Built and tested

Skill-gap roadmap

Mock interview feedback

Tamil interface

Working today

- 3 roles · 4-level skill check · readiness score
- Gap-ranked roadmap with lessons and mini-tasks
- Mock interview: 9 questions, voice or text
- English, Tamil and Hindi throughout
- 7 automated tests pass; browser-tested

Stand-ins until the pilot

- Skill check is self-rated, not yet assessed
- Rule-based scoring now; LLM feedback planned
- Flask + SQLite now; FastAPI + PostgreSQL next
- No real-student testing yet

THE INNOVATION GAP

Existing platforms vs VelaiVaasal

Area	Existing landscape	VelaiVaasal approach
Skill-gap analysis	Varies; often self-reported	Evidence-backed competency profile
Personalised plan	Generic or content-based	Prioritised by measured weaknesses
Mock interviews	Available on some platforms	Linked to continuous preparation plan
TPO insights	Placement cycle tracking	Department competency trends & support flags
Company readiness	Varies by platform	Demonstrated skills vs role requirements

Opportunity: a connected evidence → diagnosis → personalised practice → reassessment loop — not just another portal.

IMPACT

What success looks like in year one

5,000
students trained

10,000
mock interviews completed

500
internships or jobs facilitated

Pilot targets: 10 partner colleges × 500 learners, 2 mock interviews each, 10% reaching an internship or job.

Evaluation focus: improvement in assessment scores, reduction in unaddressed priority gaps, learning-plan completion, and TPO intervention reach.

For students: clearer direction & visible progress · For colleges: data-driven training · For TPOs: actionable insights

ROADMAP

From hackathon to real classrooms

Phase 1 · Hackathon

Working prototype

Role selection, skill check, skill-gap roadmap and mock interview coach in English, Tamil and Hindi.

Phase 2 · Pilot

Test with learners

Add login, baseline assessments and competency profile. Run with a partner college and collect feedback.

Phase 3 · Scale

Reach more people

TPO dashboard, additional languages, NGO partners and recruiter connections.

VelaiVaasal

SEVA MEANS SERVICE

Thank you

Don't wait for placement results to discover the skill gap.
Discover it, close it, and prove your readiness — with VelaiVaasal.

Every learner deserves a fair start.
